General Description

The Gotop GAM-1513P-MT is a complete GPS engine module that features super sensitivity, ultra low power and small form factor. The GPS signal is applied to the antenna input of module, and a complete serial data message with position, velocity and time information is presented at the serial interface with NMEA protocol or custom protocol.

Its −165dBm tracking sensitivity extends positioning coverage into place like urban canyons and dense foliage environment where the GPS was not possible before. The small form factor and low power consumption make the module easy to integrate into portable device like PNDs, mobile phones, cameras and vehicle navigation systems.

Applications

- LBS (Location Based Service)
- PND (Portable Navigation Device)
- Vehicle navigation system
- Mobile phone

Features

- Build on high performance, low-power MediaTek MT3339 chip set
- Ultra high Track sensitivity: -165dBm
- Extremely fast TTFF at low signal level
- Built in high gain LNA
- Low power consumption: Max 20mA@3.3V
- NMEA-0183 compliant protocol or custom protocol
- Operating voltage: 2.8V to 4.3V
- Operating temperature range:-40to85℃
- Patch Antenna Size: 12x12x4mm
- Module Size: 15.25x12.9x6.43mm
- Communication type: UART/TTL
- RoHS compliant (Lead-free)

1 Description

1.1. Key Features

Parameter	Specification
Power Supply	• Supply voltage: 2.8V~4.3V Typical: 3.3V
Power Consumption	• Acquisition: 20mA @VCC=VBAT=3.3V • Tracking: 15mA @VCC=VBAT=3.3V • Standby: 1.0mA @VCC=VBAT=3.3V • Backup: 7uA @VBAT=3.3V
Receiver Type	• Code 66 search channels, GPS&QZSS L1 1575.42MHz C/A • 22 simultan ous tracking channels
Sensitivity	• Tracking: -165dBm • Re-acquisition: -156dBm • Acquisition: -148dBm
TTFF (EASY enabled)	• Cold start: 15s typ @-130dBm • Warm start: 5s typ @-130dBm • Hot start : 1s typ @-130dBm
TTFF (EASY disabled)	• Cold start(Autonomous): 35s typ @-130dBm • Warm start (Autonomous): 30s typ @-130dBm • Hot start (Autonomous): 1s typ @-130dBm
Horizontal Position Accuracy (Autonomous)	• <2.5m CEP @-130 dBm
Max Update Rate	• Up to 10Hz,1Hz by fault
Accuracy of 1PPS Signal	• Typical accuracy: ±30ns, Time pulse width: 100ms
Acceleration Accuracy	• Without aid: 0.1m/s²
Dynamic Performance	• Maximum altitude: 18,000m • Maximum velocity: 515m/s • Acceleration: 4G
UART Port	• UART Port: TXD and RXD • Supports baud rate from 4800bps to 115200bps, 9600bps by default • UART port is used for NMEA output, MTK proprietary commands input and firmware upgrade
Temperature Range	• Normal operation: -40°C ~ +85°C • Storage temperature: -45°C ~ +125°C
Physical Characteristics	• Size: 15.25±0.30 ×12.9±0.20 ×6.43±0.30mm • Weight: Approx. 3.8g

1.2 Power Supply

Regulated power for the GAM-1513P-MT is required. The VCC Pin Need a stable DC voltage supply. Power supply ripple must be less than 30mV. The input voltage Vcc should be 2.8V~4.3V, Recommended power supply voltage is 3.3V, maximum current is 20mA. Suitable decoupling must be provided by external decoupling circuitry.

1.3 UART Ports

The module supports two full duplex serial channels UART. All serial connections are at 3V CMOS logic levels, if need different voltage levels, use appropriate level shifters. The baud rate of both serial ports are fully programmable, the data format is however fixed: X, N, 8, 1, i.e. X baud rate, no parity, eight data bits and one stop bit, no other data formats are supported, LSB is sent first. The modules default baud rate is set up 9600bps, however, the user can change the default baud rate to any value from 4800 bps to 115kbps. UART port can be used for firmware upgrade, NMEA output and PMTK proprietary commands input.

2 Application

The module is equipped with a 7-pin pad that connects to your application platform. The GAM-1513P-MT module It consists of a MediaTek MT3339 single chip GPS IC which includes the RF part and Baseband part, a patch antenna, a LNA, a SAW filter, a TCXO, a crystal oscillator.

3 NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a $ and with carriage return/line feed. GPS specific messages all start with $GPxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a check sum, which allows detection of corrupted data transfers.

The Gotop GAM-1513P-MT supports the following NMEA-0183 messages: $GPGGA, $GPGLL,$GPGSA,$GPGSV, $GPRMC and $GPVTG.

4 Manufacturing, Packaging and Ordering Information

4.1. Assembly and Soldering

GAM-1513P-MT module is intended for SMT assembly and soldering in a Pb-free reflow process on the top side of the PCB. It is suggested that the minimum height of solder paste stencil is 100um to ensure sufficient solder volume. Pad openings of paste mask can be increased to ensure proper soldering and solder wetting over pads. It is suggested that the peak reflow temperature is 235~245° C (for SnAg3.0Cu0.5 alloy). The absolute maximum reflow temperature is 260° C. To avoid damage to the module when it is repeatedly heated, it is suggested that the module should be mounted after reflow soldering for the other side of PCB has been completed. Recommended reflow soldering thermal profile is shown below:
Figure 4: Recommended Reflow Soldering Thermal Profile

4.2. Moisture Sensitivity

GAM-1513P-MT module is sensitive to moisture. To prevent GAM-1513P-MT from permanent damage during reflow soldering, baking before reflow soldering is required in following cases:

✧   Humidity indicator card: One or more indicating spots are no longer blue.
✧   The seal is opened and the module is exposed to excessive humidity.

GAM-1513P-MT should be baked for 8 hours at temperature 80°C . Care should be taken that the plastic tape is not heat resistant. GAM-1513P-MT should be taken out from the tape before preheating; otherwise, the tape maybe damaged by high-temperature heating.

4.3. Packaging

1. The GPS module will be delivered with antistatic tray and vacuum packaging . (As the following diagrams shown)

Figure 5: Packaging physical Figure

2.   In order to prevent the GPS module for placed for a long time and invaded by moisture,before assembling the GP S module, please put the module into the oven to bake for 8 hours under 80 ℃ temperature for remove the module int ernal moisture (This data and professional SMT factory confirmation).

✧   Please take suitable moisture-proof and temperature control measures to prevent module defects caused by storag e environment. And it is recommended to vacuum-pack the unused modules for storage
